SAFER Water Right Out Of The Kitchen Faucet

Unlike standard Reverse Osmosis, the Titanium Drinking Water System does not waste water. Some R/O units use as much as 3-5 gallons to make just 1 gallon of drinking water!

Coconut Shell Catalytic Carbon Block Filter

Reduces organics, smaller particulates, and contaminants (including chlorine and chloramines) that harm plumbing and make drinking water smell and taste bad.

Sub-Micron (0.2) Filter

Reduces 99.95% of microbial cyst (such as cryptosporidium, toxoplasma, giardia and entamoeba) that are resistant to public water disinfection and could cause health issues.

1.57 Gallon Flow Rate - Connects Directly To The Kitchen Faucet

Because it connects directly to the faucet, the Titanium System eliminates the need for a separate glass filler faucet making installation more flexible.

NSF Capacity Certification

Honest Water Filters are certified by nsf.org to effectively treat a minimum of 20,000 gallons

Does Not Waste Water

Does Not Use Electricity

Mounts Under Your Sink

100% Recyclable
