

3 Concerns In Municipal Water

There are 3 concerns in municipal water that must be addressed by a filtration system.

1. Physical Contaminants
2. Chemical Residues
3. Hard Water Minerals

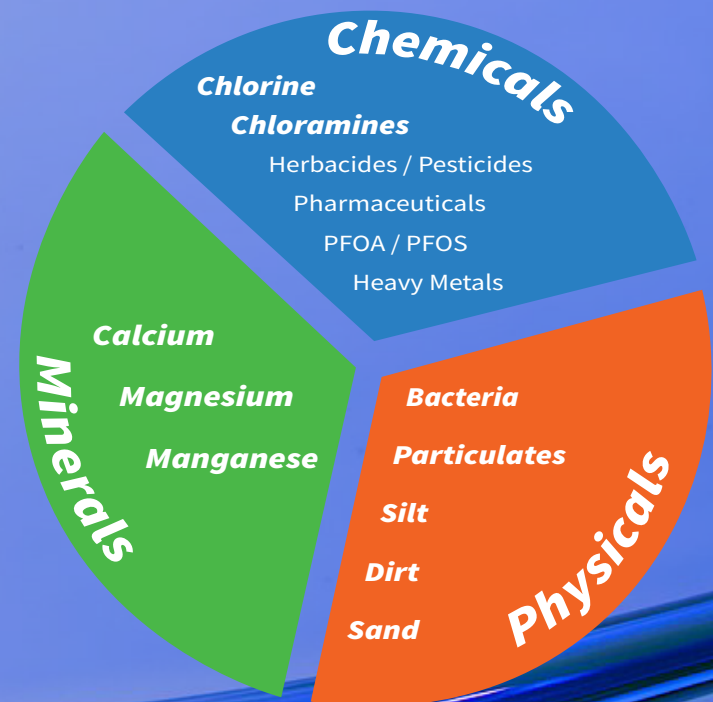

Each of these concerns affect you and your family's health, the health of your plumbing system, and all the water-using appliances in your home.

In the past, the only choice to treat these concerns was a stand-up 2 tank backwashing system. The problem was these systems were large, inefficient and wasted water.

Don't you want ONE system that efficiently treats all 3 concerns without wasting water?

Welcome to The Honest Water Filters.

1 System Treats All Three

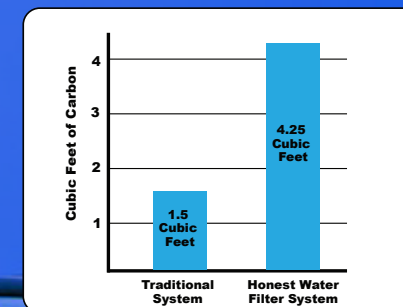

What Contaminants Can Your Filter Remove?

The Honest Water Filters are the best way to ensure you and your family are drinking, cooking, bathing and cleaning in safer, healthier water. Our water filters can filter down to 0.015* microns, thus reducing 99.95% of bacteria, viruses, cysts and a host of other contaminants! Why not get one of the BEST whole house system available today?

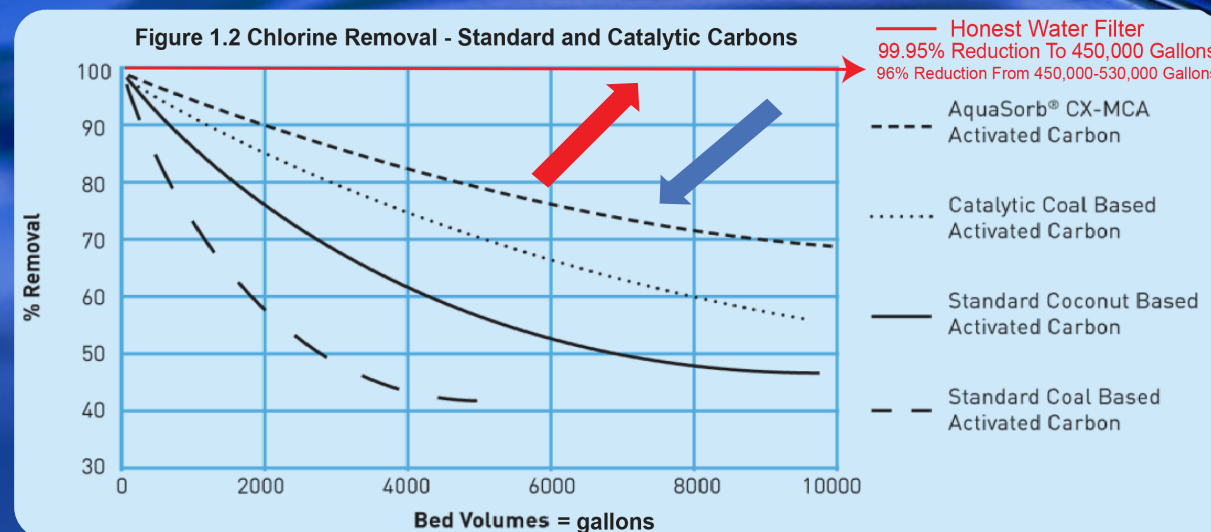

*Diamond System

Skeptical? We get that. Check out the charts below that illustrate the difference between traditional stand-up tank systems vs. Honest Water Filter systems.

We start with more than twice the activated carbon!

Loose granulated carbon falls off in effectiveness almost immediately!

Most Advanced Whole-House Water Treatment Systems
