

- Does Not Waste Water
- Does Not Use Electricity
- Mounts on the wall to save space
- 100% Recyclable

A Hard Water Solution

Pinhole Leak Protection For Your Expensive Plumbing System

A staggering 85% of the U.S. has hard water. Hard water is high in mineral content largely made up of calcium, magnesium carbonates, bicarbonates and sulfates. These minerals when exposed to air or frozen turn white. That is why you see white film around your faucets, glasses and in your ice cubes.

Our Bronze system employs polyphosphates as a hard water solution that reduces inorganic contaminants like iron, manganese, calcium and magnesium. Inorganic contaminants are what cause biofilm, corrosion and scale build up on plumbing fixtures and pipes. Polyphosphates sequester the hard water minerals and protects your plumbing from limescale formation and corrosion thus preventing pinhole leaks and other costly plumbing issues.

10.0 micron filter helps reduce sediments, dirt and particulates.

NSF rated to treat 300,000 gallons per 2 cartridge system.

The Honest Water Filter is the best way to protect your plumbing and water-using appliances from hard water corrosion.
